

Macros

23 July 2025 12:39

Macros are jinja templates created in the macros folder

There are built in macros in DBT

You can use macros in model definitions and tests

A Specialised macro called test can be used for implementing your own generic tests.

Dbt packages can be installed easily to get access to a plethora of macros and tests

To use any external package :

We need to update and add package in our **project.yml** folder.

And Then use the command: **dbt deps**
