

Snapshots

21 July 2025 18:38

For SCD type of source, DBT uses a snapshot to take a snapshot of the data.

Snapshots live in the snapshots folder

They are two strategies that is to be followed:

1. **Timestamp**: Uses a CDC Columns to check the validity of the transaction
2. **Check** : Any change in a set of columns will be picked up as an update.

To run dbt-snapshots : Run dbt-snapshots command
